

Amendments to the Claims:

This Listing of Claims replaces all prior versions, and listings, of claims in the application.

Listing of Claims:

Please amend claims 1, 9 and 30 as follows:

1. (currently amended) A transducer, comprising:  
a cylinder located within a housing where the cylinder has an upper edge;  
a diaphragm coupled to the upper edge of the cylinder[, where the diaphragm is free along the upper edge of the cylinder];  
a voice coil coupled to the cylinder;  
a first surround having a first inner edge and a first outer edge, where the first inner edge is coupled to the cylinder and the first outer edge is coupled to the housing and having only one roll between the first inner and outer edges; and  
a second surround having a second inner edge and a second outer edge, where the second inner edge is coupled to the cylinder and the second outer edge is coupled to the housing and having only one roll between the second inner and outer edges, and where the first and second inner edges of the first and second surrounds are coupled to the cylinder between the diaphragm and the voice coil.
2. (original) The transducer according to claim 1, where the first and second surrounds are substantially similar in shape.
3. (original) The transducer according to claim 1, where the first surround has a first outer diameter and the second surround has a second outer diameter, where the first outer diameter is greater than the second outer diameter.
4. (original) The transducer according to claim 1, where the voice coil has a pair of lead wires extending out of the housing between the first and second surrounds.
5. (original) The transducer according to claim 1, where the first and second surrounds face up.

6. (original) The transducer according to claim 1, where the first and second surrounds face down.

7. (original) The transducer according to claim 1, where the first and second surrounds face away from each other.

8. (original) The transducer according to claim 1, where the first and second surrounds face toward each other.

9. (currently amended) A transducer, comprising:  
a cylinder within a housing and the cylinder having an upper end and a lower end:  
a first surround having only one roll between the cylinder and the housing, where the first surround is coupled to the cylinder and the housing: [and]  
a second surround having only one roll between the cylinder and the housing, where the second surround is at a predetermined distance from the first surround and is coupled to the cylinder and the housing[.]; and

a voice coil coupled to the lower end of the cylinder so that the first and second surrounds are above the voice coil.

10. (original) The transducer according to claim 9, further including a lead wire running between the first and second surrounds.

11. (original) The transducer according to claim 9, further including a voice coil coupled to the cylinder.

12. (original) The transducer according to claim 11, where the voice coil is located between the first and second surrounds.

13. (original) The transducer according to claim 11, where the second surround is located between the first surround and the voice coil.

14. (original) The transducer according to claim 9, further comprising a diaphragm coupled to an upper edge of the cylinder.

15. (original) The transducer according to claim 9, where the cylinder has a circular cross-section.

16. (original) The transducer according to claim 9, where the first and second surrounds have a half-circle roll.

17. (original) The transducer according to claim 9, where the first and second surrounds substantially have a parabolic cross-sectional shape roll.

18. (original) The transducer according to claim 9, where the first surround is substantially similar to the second surround.

19. (original) The transducer according to claim 9, where the first surround is substantially symmetrical to the second surround.

20. (original) The transducer according to claim 9, where the first surround is non-symmetrical to the second surround.

21. (original) The transducer according to claim 9, where the first surround has a first roll, and the second surround has a second roll, where the first roll faces down and the second roll faces up.

22. (original) The transducer according to claim 9, where the first surround has a first roll, and the second surround has a second roll, where the first and second rolls face up.

23. (original) The transducer according to claim 9, where the first surround has a first roll, and the second surround has a second roll, where the first and second rolls face down.

24. (previously amended) The transducer according to claim 9, where the first surround has a first roll, and the second surround has a second roll, where the first roll faces up and the second roll faces down.

25. (original) The transducer according to claim 9, where the second surround has a smaller outer diameter than the first surround.

26. (previously cancelled)

27. (original) The transducer according to claim 9, where the first and second surround have a sinusoidal face.

28. (previously cancelled)

29. (original) The transducer according to claim 9, where the cylinder is made of a substantially rigid material.

30. (currently amended) A dual surround transducer assembly, comprising  
a first surround only having one roll and connecting a cylinder with a housing;  
a second surround only having one roll and connecting the cylinder with the  
housing; [and]  
where the first and second surrounds are spaced apart from each other and are  
made from different materials[.]; and

a voice coil coupled to the cylinder, where the second surround is between the  
first surround and the voice coil.

31. (currently cancelled)

32. (original) The dual surround transducer assembly of claim 30, further comprising  
a diaphragm coupled to an upper edge of the cylinder.

33. (original) The dual surround transducer assembly of claim 30, where the first and  
second surrounds are substantially similar.

34. (original) The dual surround transducer assembly of claim 30, where the first and  
second surrounds have a half-circle cross-sectional shape roll.

35. (original) The dual surround transducer assembly of claim 30, where the first and  
second surrounds have a parabolic cross-sectional shape roll.

36. (previously amended) The dual surround transducer assembly of claim 30, where  
the first and second surrounds have a sinusoidal face.

37. (original) The dual surround transducer assembly of claim 30, where the two surrounds face up.

38. (original) The dual surround transducer assembly of claim 30, where the two surrounds face down.

39. (original) The dual surround transducer assembly of claim 30, where the two surrounds face towards each other.

40. (original) The dual surround transducer assembly of claim 30, where the two surrounds face away from each other.

Claims 41 through 50 are cancelled.
